Standards Version Advancement Process (SVAP) Notice 2025

Developer Name: EZDERM LLC

Product Name(s): EZDERM

Version Number(s): 4.0

Certified Health IT: 15.04.04.2987.EZDE.04.02.1.221213

Product List (CHPL) ID(s): 15.04.04.2987.EZDE.04.02.1.221213

Developer Real World Testing Page URL: https://www.ezderm.com/fully-certified

1. Express Intent to Update

We intend to update our certified health IT product, EZDERM, to use the SVAP-approved version of the following standard:

- United States Core Data for Interoperability (USCDI), Version 1, July 2020 → United States Core Data for Interoperability (USCDI), Version 3.1, June 2025

2. Real World Testing Expectations

The update is intended to improve interoperability with external health IT systems and ensure that our product supports the new standard version.

The updated standard version will allow more accurate exchange of structured clinical data with external health IT systems.

End users will not experience significant workflow changes; the update is largely backend and maintains existing user interfaces.

3. Deprecation / Support of Existing Standards Versions

This update will be implemented through the Standards Version Advancement Process (SVAP) under the Real-World Testing condition of certification.

The product will deprecate the existing version of the standard upon release of the SVAP update.

The update is expected to be implemented in Q4 2025.
