

Your Trusted Partner In Dermatology

Founded by a dermatologist, Ezderm is built exclusively for dermatology. Every feature, workflow, and support resource is designed around how dermatology practices actually operate—clinically and financially.

One Unified Ecosystem

Ezderm connects your EHR, practice management, scheduling, check-in, billing, patient engagement, and payments processing tools into a unified ecosystem. All modules share the same data in real time—eliminating duplicate entry, reducing errors, and keeping every role aligned across the practice.

Revenue Cycle Management

Ezderm offers full-service dermatology revenue cycle management supported by certified, dermatology-trained billers. With a proven 98% net collections rate, our team helps practices reduce billing friction and capture revenue more reliably—without adding internal overhead.

MIPS Integration

Ezderm integrates with Healthmonix, a certified data registry, to automatically track and submit MIPS measures. This reduces manual reporting, supports compliance, and gives practices confidence that quality data is captured correctly without added staff burden.

Integrated Payments

Ezpay is seamlessly integrated into the Ezderm ecosystem to handle patient payments directly within the EHR and practice management system. Payments post in real time, eliminating double entry and reconciliation while creating a clear, accurate financial record.

Ezderm is designed to support the entire patient visit—from scheduling and clinical documentation to billing and payment—within one connected system. Every step works together, reducing handoffs, rework, and administrative friction across the whole practice.

SCHEDULE

Keep schedules full, coordinated, and on-track.

- Schedule across providers, locations, and shared resources with real-time visibility
- Reduce no-shows with automated reminders and two-way patient confirmation
- Collect insurance, forms, and intake digitally before the visit
- Manage waitlists, recurring visits, and online scheduling in one place

DOCUMENT

Dermatology-specific documentation built for speed and accuracy.

- Document visits with our 3D body map, photo timelines, and derm templates
- Support Mohs, biopsies, malignancy tracking, isotretinoin, and cosmetic workflows
- Generate location-specific ICD-10 and CPT codes automatically
- Enable simultaneous documentation by multiple team members
- Use built-in AI to summarize encounters

COLLECT

End-to-end billing and payments designed to protect revenue.

- Verify insurance eligibility to prevent avoidable denials
- Capture clean encounters with automated coding and claim-ready documentation
- Track claims, denials, and A/R with real-time visibility
- Post ERA/EOB payments and manage patient balances accurately
- Provide upfront cost estimates to patients
- Collect revenue 24/7 with integrated online bill pay
